Residence hall rooms going wireless!

The LSU Department of Residential Life is in the process of adding wireless broadband Internet connectivity to all the residence hall student rooms, and anticipates having all rooms in the 17 residence halls wireless by fall 2009. Installation in the new Engineering Residential College (South Hall) is complete, and the Business Residential College (West Hall) will be finished by late November. Broussard Hall, home of the Information Technology Residential College, is scheduled to be complete before Christmas break. The University Information Technology Services department is completing this first stage of the installation program, and will work closely with Residential Life as the remaining residence halls are finished.

All 17 residence halls already have wireless connectivity in all common areas, including foyers, patios, meeting rooms, study rooms, kitchens and laundry rooms. Adding wireless connectivity to all student rooms will add to the extensive technology services already provided to our residents. Once completed, each room will have both wired (Ethernet) and wireless Internet connectivity.

The LSU Department of Residential Life is committed to meeting the growing technological needs of its 21st Century residents.
